**GOV'T MASTER**

**FREQ.FIRST**

## ABBREVIATIONS USED- US GVT. FREQ. ASSIGNMENTS

ASU- Immigration/Border Patrol Anti-Smuggling Unit  
ATF- Alcohol/Tobacco & Firearms  
BIA- Indian Affairs  
BIFC- Forest Service, Boise Inter-agency Fire Cache  
BLM- Bureau of Land Management  
BOR- Bureau of Reclamation  
CNF- Cleveland National Forest  
COE- Corps of Engineers  
DOE- Dept. Of Energy  
DOT- Dept. Of Transportation  
EPA- Environmental Protection Agency  
FCSN- Fire Camp Service Net  
FEERS- Federal Executive Emergency Radio System  
FEMA- Federal Emergency Management Agency  
FLETC- Federal Law Enforcement Training Center  
FN- Forest Net  
GSA- General Services Admin.  
HUD- Housing & Urban Development  
IBW/IBWC- U.S./Mexico International Boundary & Water Commission  
INS- Immigration & Naturalization Service  
JPL- Jet Propulsion Lab- Pasadena  
LFF- Los Padres Natl. Forest  
LAX- Los Angeles Airport  
NEST- DOE- Nationwide Nuclear Emergency Search Team  
NPS- National Park Service  
NSA- National Security Agency  
NTSB- Natl. Transportation Safety Board  
SAM- Special Air Mission (Air Force 1 & 2, Etc.)  
USA- Army  
USBP- Border Patrol  
USC- Customs  
USCG- Coast Guard  
USDA- Agriculture  
USFS- Forest Service  
USFW- Fish & Wildlife  
USGS- Geological Survey  
USMS- Marshals Service  
USPS- Postal Service  
USSS- Secret Service  
WHCA- White House Communications Agency

# **MONITORING TIMES**

## **Restoring Cellular Coverage on the PRO-2004**

1. Remove the four cabinet screws and the cabinet
2. Turn receiver upside down and locate circuit board PC-3
3. Remove seven screwsholding board and plug CN-501
4. Carefully lift up the board and locate diode soldered in place below the module
5. Snip one lead of the diode carefully, leaving it suspended by the other lead for later reattachment if desired, such as for warranty repair
6. Reverse first four steps above for reassembly. Radio will now cover 825-845 and 870-890 MHz and search in 30 kilohertz increments for no-gap 760-1300 MHz reception.

## CAR PHONE SCANNER?!

Mark Swarbrick

All car phones have a built-in receiver function to help the repair technician to fix the phone; with a little help a car phone can be converted into a mobile phone scanner.

Novotel models all have a computer "back door" which allows access to its internal memory and diagnostics. For the Novotel 150 the code is (FCN) Lock \* 259 (CLR) #; the Novotel 290 or 390 is (FCN) Lock #82\*.

These codes must be entered within 5 seconds and the display will change.

Push the volume control up or down until "frequency" is displayed; Enter three-digit numbers (350-999) into this display until you can hear a conversation. On the 290 or 390 models push the volume control until "receiver" is displayed; push (SND) to toggle it on; push volume 'til frequency is displayed, and enter the channel.

The speaker volume display will allow you to raise the volume (1-10); *Do not make any other changes* as this will shut the phone down. By entering the channel numbers randomly you will find conversations. Write down the number and continue on until you have a list, then you can jump from conversation to conversation with little effort.

Occasionally, you will hear a buzz noise and the phone conversation will disappear due to cell changes. To exit this mode push (End).

All car phones have this receiver but without knowing the codes it is impossible to access. This information is very difficult to obtain. If you can, watch the installer during programming.

*(NOTE: While MT does not condone unauthorized monitoring of mobile telephone, the technical insight offered by reader Swarbrick is unusual and worthy of note...Ed)*
